Construction of a kindergarten in Stare Oborzyska

Project description:

As a result of the project, a new building was erected allowing to provide pre-school education to children aged from three to six years from the Kościan Commune. The facility was incorporated into the existing School Complex in Stare Oborzyska – the previous seat of the kindergarten. The implementation of the project solved the problem of too few places of pre-school education in the area covered by the project and contributed to the improvement of the accessibility of pre-school education. This project was carried out in parallel with a complementary project: ***"Creation of new pre-school education facilities and extension of the educational offer for the needs of the new kindergarten in Stare Oborzyska"***. The initiative allowed for the introduction of additional classes, including speech therapy as well as music and rhythm classes with dance elements. Teaching aids and toys for children were also purchased.
