

Development of a concept concerning innovative technical solutions for the new LLE buses

Project description:

Detailed information:

The objective of the project was to come up with technical solutions allowing for the development of an innovative series of LLE buses. The LLE symbol stands for: L – Lite that is light, and LE - Low Entry. Growing market demand inspired the works on the concept of such a vehicle. The project made carrying out analyses and tests possible as well as developing technical solutions significantly different from those which are currently being applied by the company. Works related to the development of a completely new body structure, suspension and all functional systems together with simplification of the equipment were realized. The undoubted advantage of the project involved equipping the innovative laboratory designated for empirical research (it was connected to the verification of the concept) and the expansion of the research potential.

Beneficiary:

SOLARIS BUS & COACH SPÓŁKA AKCYJNA

Programme:

WRPO 2014+

Fund:

European Regional Development Fund

Total value of the project:

PLN 10,393,308.68

EU contribution:

PLN 6,042,664.97
